

WIZARD® DRUM TOOL COMPANY

Drum Deheading Accessories

Wizard® Drum Tool Company manufactures the only full-line of drum deheading tools available anywhere in the world... we also manufacture a full line of accessory equipment to complement our drum deheaders. Listed below are several Wizard® accessories that will make your drum deheading easier and safer.

WIZARD® TOWER

the foundation of a complete drum deheading station Part #3150

This unit keeps self-propelled drum deheaders at working height and minimizes lifting. Suitable for portable or permanent installation, it saves time when opening large numbers of drums. A complete deheading station should include the tower as well as a Wizard deheader, chime de-kinker, universal wrench and spare deheading tool.

WIZARD® CHIME DE-KINKER

Part #3870

This useful tool restores dented chimes to their original contours to simplify deheading. It provides great clamping power with little effort.

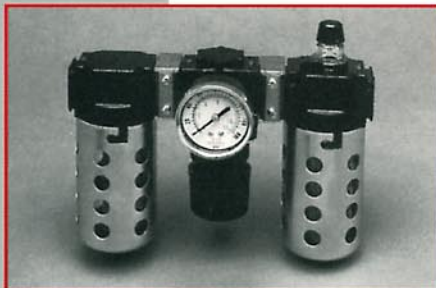

Nonferrous Bronze - Part #121

WIZARD® UNIVERSAL WRENCHES

These all-plug wrenches, made in the U.S.A. as are all Wizard® products, easily and safely open all known styles of U.S. and foreign-made bungs and fittings on drums. They are available in ductile iron or nonferrous bronze.

Ductile Iron - Part #120

REGULATOR AND LUBRICATOR

Part #3041

The FRL is a modular unit ideally suited for use with all Wizard® air operated drum openers. The filter features high performance cleaning action. The regulator has an adjusting knob with friction lock to maintain pressure setting. The lubricator has a variable orifice which maintains constant oil-to-oil ratio regardless of changes in air flow.
